PAR 4 · HCP 7

CONVERSION NOTES

Source pages re-laid into the No.1 Golf book format

NUMBERS AT A REFERENCE POINT

Red	to the front of the green
Superscript	elevation change from there to the green, in yards
(Parentheses)	to the green, as the source page measures it
Black	from the tee

WHAT CARRIED OVER FROM THE SOURCE

Green outline	traced from the source green panel
Depth and width	stated on the source page; used to set the scale
Perimeter marks	the source page's depth figures around the green
Elevation profile	the source page's per-station values, verbatim
Hole shape	vector colour fills, or the satellite corridor mask
Tee, par, HCP, yardage	as printed on the source page

WHAT THE SOURCE DOES NOT CARRY

Green contours and slope arrows
the source green panel has no surface data at all, so the
centre of this format's green page cannot be filled from it

Sprinkler references
no numbered references on the source page

Ground contouring
no terrain shading on the source hole page

Tee ladder
only one tee set is shown per source page

SCALE CHECK

Cowboys 9 green	traced 15 x 35 yd against 16 x 35 stated
Bridlewood 9 green	traced 26 x 33 yd against 26 x 33 stated
Cowboys 9 hole page	1.31 px per yard on the source screenshot
Bridlewood 9 hole page	1.43 px per yard on the source screenshot

Converted from screenshots, so outlines carry the resolution of the screen grab. A vector PDF would give clean geometry and exact label positions instead of traced approximations.
